RAILING OPTIONS for the Deck

Having a variety of decking options, from plank styles to railing designs, has become more and more important to both builders and consumers alike, allowing for custom outdoor living spaces. TimberTech®, a leading manufacturer of composite decking, railing and fencing products, recently introduced three new products to address this trend.

Some time ago TimberTech introduced the XLM line of extremely low-maintenance decking boards. As a complement, RadianceRail® has now added a new railing

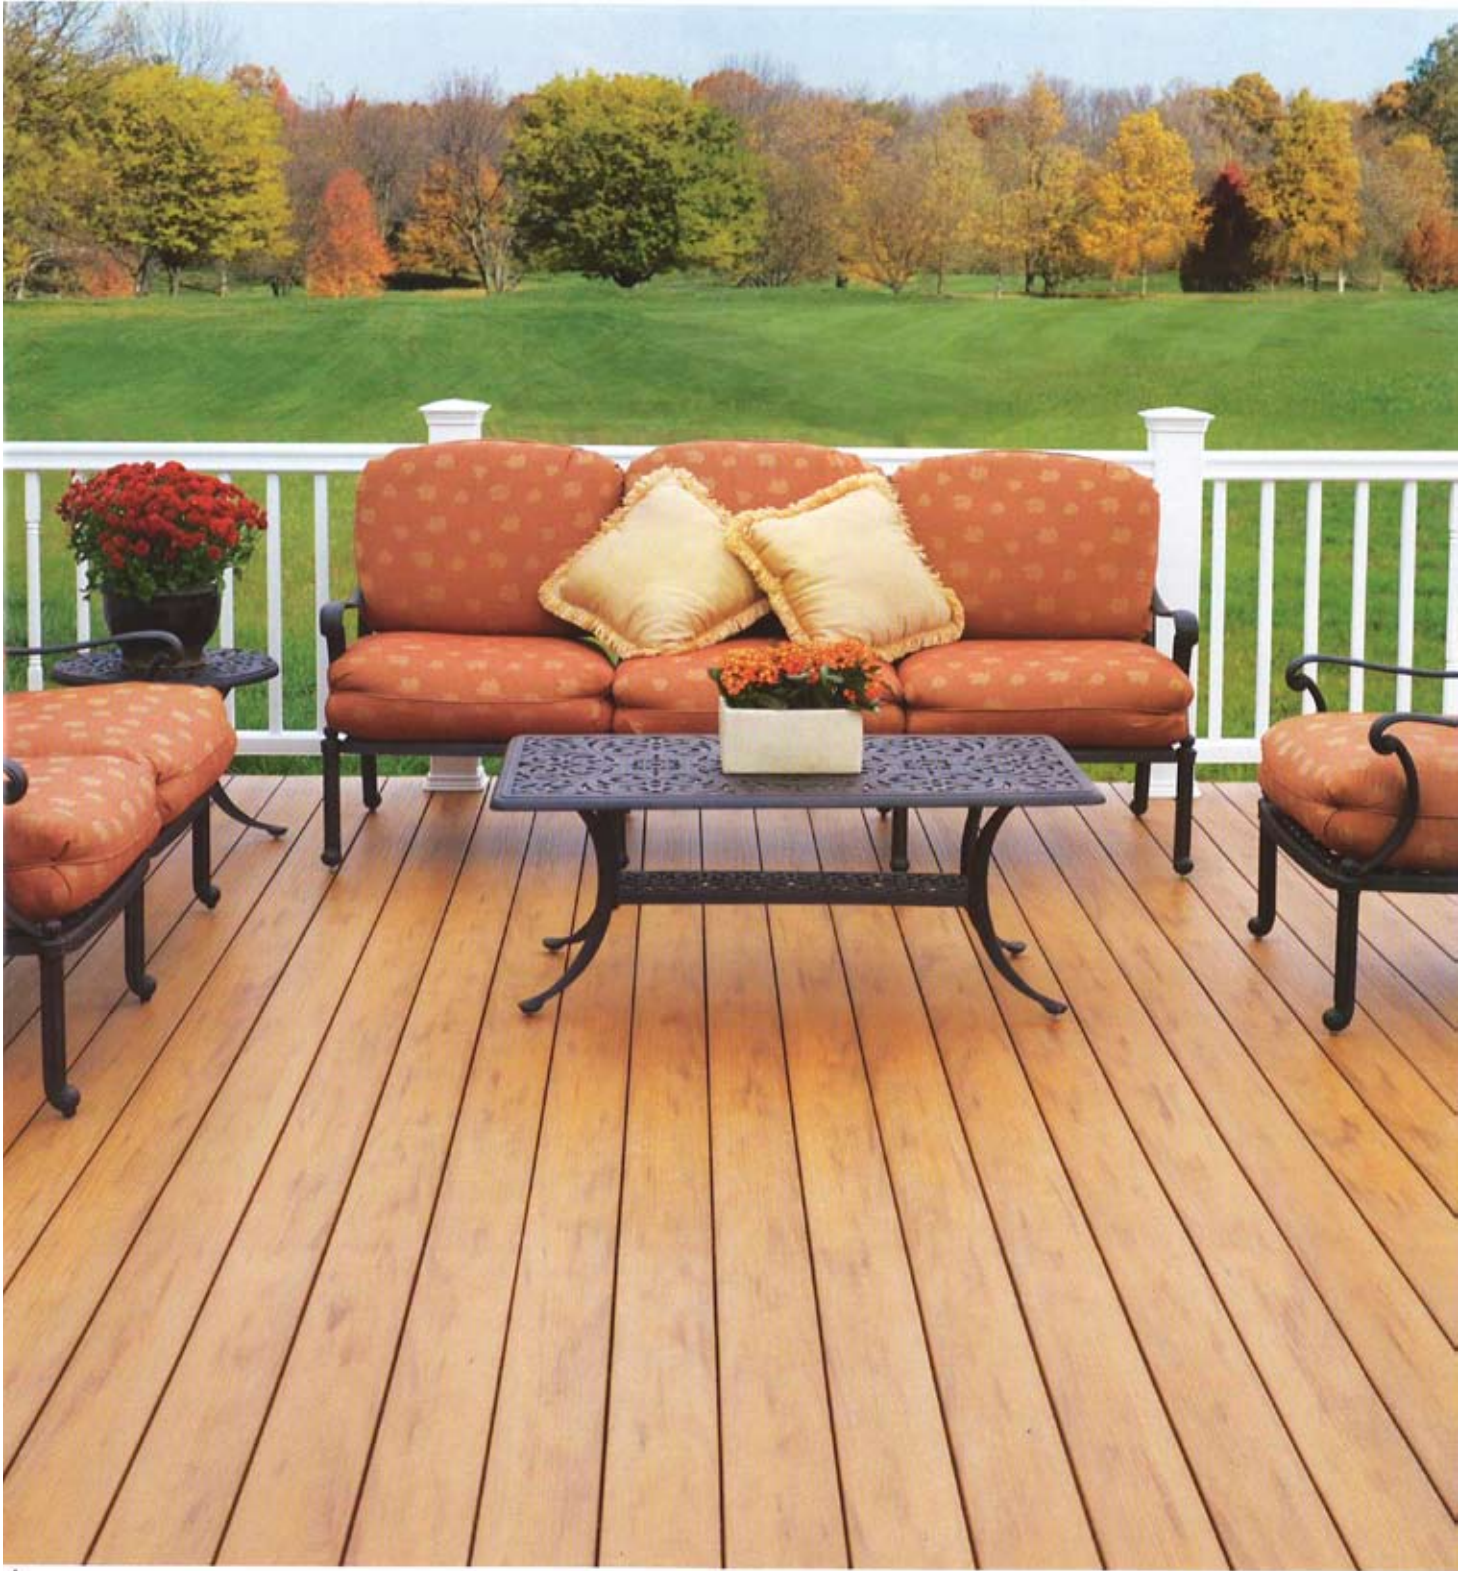

line in five colors that allows mixing or matching railing systems colors to those of the XLM decking. New also from TimberTech is the BuilderRail™ system that offers exceptional value without sacrificing quality. Lastly, the company has added a new colonial design spindle to its existing Ornamental Railing System line.

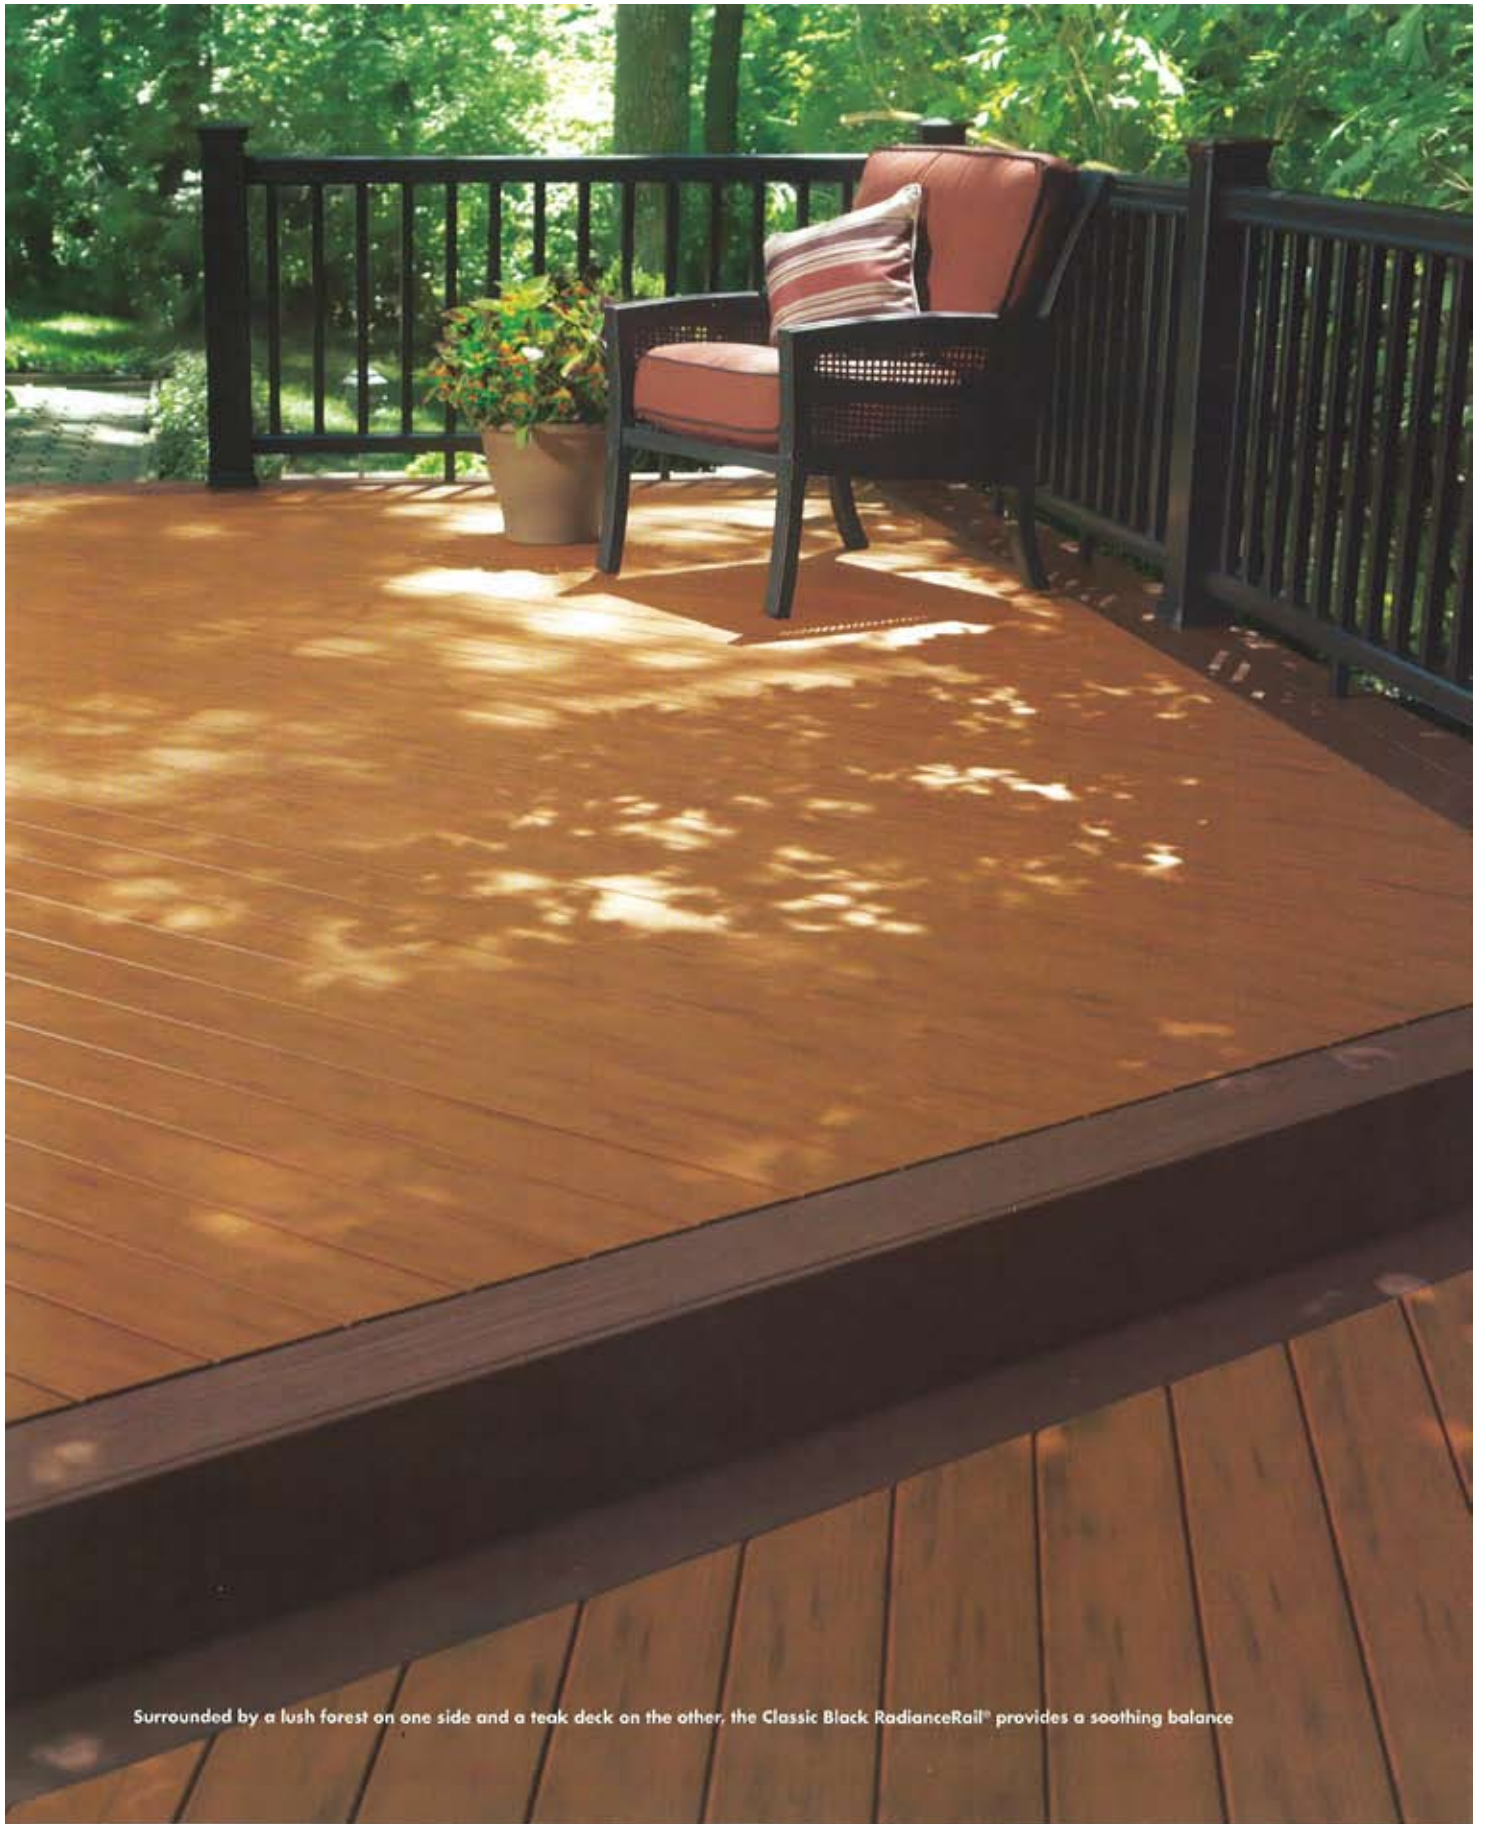

No other company in the industry offers a railing system such as TimberTech's RadianceRail with a color-matching system for PVC decking and railings. Colors include

Coastal White, Classic Black, SandRidge, RiverRock and Mountain Cedar.

RadianceRail is made from precision-engineered TimberTech composite capped with a durable PVC layer giving it the sturdy and structural feeling of a wood railing with a cleaner look and no exposed hardware.

According to Tom Day, TimberTech's senior product manager, "Customers appreciate these railings because of their cleanliness and aesthetic qualities; contractor's appreciate

Surrounded by a lush forest on one side and a teak deck on the other, the Classic Black RadianceRail® provides a soothing balance

An alternative to wood decks and railings, TimberTech® composite products offer an attractive, low-maintenance and extremely durable substitute to treated woods

them because they are a breeze to install and are very customizable. With the introduction of XLM decking, we decided to offer exact color match railing choices that complement the low-maintenance decking boards.”

The new BuilderRail railing kit offers

homeowners the perfect balance of price *and* quality. These black metal balusters and low-maintenance composite rails are available in three attractive colors: Cedar, Gray and Redwood.

The black metal balusters are galvanized

inside and out and powder-coated, delivering an extremely durable system that requires virtually no maintenance, and their slender profile increases visibility with minimal obstructions. The new colonial style spindle is available in Cedar, Grey, Redwood and Whitesand.

SERENITY GARDEN LANDSCAPES

Like all TimberTech decking systems, the Ornamental Railing System is made from a patented formulation of pure plastic resins and high quality wood flour. It's designed to match the beauty of wood while also being an attractive replacement for wood, vinyl and other composite railing systems. The result is a rail system with incredible aesthetics that is easy to install and maintain compared to wood.

All TimberTech railing systems are available in both 6' and 8' kits that provide all of

Architectural style, detailed accessories and ease of installation puts the RadianceRail in a class of its own

the components necessary for straight rail sections, angled rail sections and stair rail sections. Additional items for all TimberTech railing systems, such as post covers, caps and skirts, are available separately. TimberTech composite products are backed by a 25-year limited residential warranty and metal balusters are covered by a 10-year limited residential warranty. AH
