Full Glass Railing Installation Guide

Aluminum Posts ......................... 4
Glass Panels ................................. 8

See Railing Panel Installation Guide for Stair Panels and Gate Kits.
Important Information

- Please read all instructions completely before starting any part of the installation. Always make sure to visit www.TimberTech.com to ensure you are viewing the most current installation instructions, care and cleaning, technical information and more.
- Impression Rail Express should be installed using the same good building principles used to install wood, composite, or metal railing and in accordance with the local building codes and the installation guidelines included below.
- The AZEK Co. LLC accepts no liability or responsibility for the improper installation of this product.
- Impression Rail Express may not be suitable for every application and it is the sole responsibility of the installer to be sure that Impression Rail is fit for the intended use. Since all installations are unique, it is also the installer’s responsibility to determine specific requirements in regards to each rail application.
- The AZEK Co. LLC recommends that all applications be reviewed by a licensed architect, engineer or local building official before installation. If you have any questions or need further assistance, please call AZEK Customer Service at 877-ASK-AZEK (877-275-2935), or visit our website at www.TimberTech.com.
- Impression Rail Express is tested as a whole system and should be used that way. It is not intended to be used in conjunction with other railing systems or fasteners.
- The following Installation Guidelines are applicable for installation of Impression Rail Express only.
- IMPORTANT: Make sure the DRIVE TOOL/DRILL is configured or set to use the SCREW setting when driving and/or tightening all FASTENERS.
- SAFETY: Always wear goggles when handling, cutting, drilling and fastening materials.
- Failure to install this product in accordance with applicable building codes and Impression Rail Express’s written Rail Install Guide may lead to personal injury, affect rail system performance and void the product warranty.
- The buildup or generation of static electricity is a naturally occurring phenomenon in many plastic based products such as carpeting, upholstery, and clothing, and can occur on alternative decking under certain environmental conditions. This static electricity can discharge once contact is made with hardware, railing, or other conductors of electricity.

NOTE: IF INSTALLING POST LIGHTING, WIRING MUST BE INSTALLED PRIOR TO SECURING POSTS TO DECK/STAIR SURFACE AND INSTALLING TOP RAIL SNAPS.

It is the responsibility of the installer to meet all local code requirements and obtain all required building permits. The installer should determine and implement appropriate installation techniques for each installation situation. AZEK Co. LLC or its reseller shall not be held responsible for improper or unsafe installations.
Installing Impression Rail™ Express Glass Railing System

**CONCRETE APPLICATIONS**

When posts are secured to concrete substrates use concrete anchors (sold separately)

---

**Important Note:**

- 6' Panel Actual Length is 69.43"
- 3" posts are required to reach 6' length
- Only 3" posts can be used for glass infill

---

**Suggested Tools:**

- Appropriate fasteners for mounting posts to deck
- Miter saw with carbide-tipped non-ferrous blade
- Cordless drill
- Tape measure
- Level
- Power cords, drop sheets and safety glasses
- 3/16" Drill bit
- 6" #2 Square drive bit
- Installation jig (optional)

---

**Important Note:**

Prior to construction, check with your local regulatory agency for special code requirements in your area.

Common railing height is 36” or 42”. Post spans will vary depending on job site conditions. Never span more than 6’ on-center between railing posts. Spans longer than 12’ in length will require reduced post spans. Refer to the system evaluation at the end of these instructions. For all other applications, consult a design professional or an AZEK railing representative for more information. Read instructions completely to get an understanding of how the product goes together and how each piece affects the other.
Installing Impression Rail™ Express
Glass Railing Posts

1 Determine Post Configurations and Locations
(end, center, corner, etc.)
(Dia. #1)

2 Prepare Posts

Post preparation (Option 1 - No Install Jig)
• Measure 2-3/8” from end of post extrusion and place a pencil mark for location of bottom edge of glass receiver.
• Position bottom edge of glass receiver on pencil mark at 2 3/8”, center receiver on post and secure with 2-#10 x 1-1/2” self-drilling screws. (Dia. #2)
• Once bottom receiver is secure, measure 29 3/4” for 36” rail height or 35 3/4” for 42” rail height from top edge of bottom glass receiver, mark a line for placement of top clip.
• Place rail clip bottom edge on pencil mark and center clip on post, secure with base attachment screws.

Post preparation (Option 2 - With Install Jig)
• Install lower receiver to appropriate post face using Jig. (Dia. #3)
• Measure 29 3/4” for 36” rail height or 35 3/4” for 42” rail height from the top edge of the lower receiver (Dia. #2) and place a pencil mark for placement of bottom edge of upper clip.
• Place rail clip bottom edge on pencil mark and center clip on post, secure with 2-#8x3/4” self-drilling screws. (Dia. #2)
3 Install Stair End Posts (if applicable)

- Temporarily install end stair post so rail centerline aligns with top stair posts installed in Step 1 (if applicable). Recommended post installation locations are shown. (Dia. #4) Confirm with local code officials before installing stair rail sections or stair rail posts to ensure compliance with local code requirements.

**Important Note:**
See Aluminum Railing Guide online for complete stair railing installation instructions.

4 Install End Posts (if applicable)

Install posts at all end locations with maximum gap between post and wall to be less than a 4” opening. (Dia. #5)

5 Install 90-degree Corner Posts

Position post on same 3” centerline (typical) and temporarily fasten using a single fastener through base plate mounting hole. (Dia. #6)
Install 45-degree Corner Posts

Position post on same 3” centerline (typical) and temporarily fasten to deck surface. Use one 22.5° Panel Attach Kit (purchased separately) to install 45 degree corner posts. (Dia. #7)

Determine Center Post Locations

Loosely lay center post over deck edge and adjust as required to determine final center post mounting locations. (Dia. 8 & 9)

Important Note:
- 6’ Panel Actual Length is 69.43”
- 3” posts are required to reach 6’ length
- Only 3” posts can be used for glass infill
Secure 3" Center Posts to Deck

- Install 3" posts centered between 3" end and corner posts.

   NOTE: 3" center posts must be installed with center screw chases in-line with panel.
Prepare Glass Channels

- Measure and cut top and bottom rail extrusions to fit between posts (1/16" less than opening size). (Dia. #1)
  
  **Note:** Bottom vinyl rail channel should be cut with bottom rail extrusion, top vinyl rail channel should be removed before cutting. (Dia. #2)
- Snap bottom foot block into bottom rail assembly so mounting hole faces inward to deck surface. (Dia. #2)
Installing Impression Rail™ Express
Glass Railing Panels

2 Install Top and Bottom Glass Extrusions

• Starting at end post or top stair post (Dia. #3A), install the bottom rail extrusion, with vinyl insert, into the bottom receiver of the first two posts. Next, slide the top rail glass extrusion, without the vinyl installed, onto the upper rail attachment clips.

• Secure the posts to deck surface, then secure top rail glass extrusion to top railing attachment clip (Dia. #3B & #3C). Continue working from one post to the next. Install next piece of bottom rail, then secure the top rail extrusion to the rail clips until all rail sections are fastened to posts and posts are secured to deck surface.

NOTE: See Aluminum Railing Guide online for complete post installation instructions.

• Center foot blocks between posts and fasten to deck. (Dia. #13D)

Note: Foot Blocks are required for all spans of 4’ or greater.
**Important Note:**

The top snap covers should snap firmly onto the aluminum railing channels. **Do not use a hammer.** The top rails will snap by applying pressure from one end to the other. If you’re having issues snapping on the covers, check the clips to ensure that they are bottomed out into the aluminum railing channels. **Foot Blocks must be installed BEFORE installing Top Rail Snaps.**

---

**3 Install Top Rail Snap**

Measure between each secured post and cut top rail snap 1/16" less than opening size (Dia. #4). Clean cut areas and apply touch-up paint on all exposed metal. Snap each top rail snap over the corresponding glass rail extrusion until properly seated.

**NOTE:** Do not install top snaps yet if lighting wires will be run through top rails.

**TIP:** Roll the Top Rail Snap in place to avoid scratching the posts and put weight down to get to the “second” snap.

---

**4 Install Top Glass Inserts**

- Measure between posts and subtract 2" from overall measurement. Cut top vinyl glass channel to provide clearance at post clip locations.
- Insert glass channel into top rail extrusion, butted against support clip approximately 1" from post. (Dia. #5)
5 Install Glass Panels

Position glass so gap between panel edge and post is equal on both ends. Glass gap at ends is typically 3” but can vary depending on application. Maximum gap must be less than 4”. Insert glass panels upward into glass insert (Dia. #6A) and swing panel over opening in bottom rail glass insert. Pull panel downward until panel is resting firmly inside of bottom glass insert (Dia. #6B). Continue until all glass panels are installed.

**TIP:** Window cleaner may help ease glass panel into top and bottom rail assemblies.

6 Final Inspection

When railing is completely installed, complete one final check to ensure all fasteners are properly secured.

---
