TIMBERTECH THE IPE WOOD ALTERNATIVE FOR LUXURY DECKING

A. TIMBERTECH HAS MULTIPLE OPTIONS THAT MIMIC THE LOOK OF IPE, INCLUDING THE MAHOGANY COLOR FROM THEIR VINTAGE COLLECTION.

B. WITH OVER 30 REALISTIC WOOD FINISHES, IT'S EASY TO FIND THE PERFECT MATCH FOR YOUR OUTDOOR SPACE.

C. FEATURING MULTITONAL COLOR BLENDING, THE VINTAGE COLLECTION (ENGLISH WALNUT SEEN HERE) IS A SUSTAINABLE ALTERNATIVE TO EXOTIC HARDWOODS.

Create the outdoor living space of your dreams with a sustainable, low-maintenance deck. TimberTech offers a durable premium decking product with the rich aesthetics of ipe wood and a far smaller environmental impact. The demand for ipe has grown 76 percent over the last 10 years, but ipe trees are slow-growing, with some species taking 100 years to reach maturity. Plus, the carbon emissions from shipping the hardwood from Brazil to the United States can harm the environment. Alternatively, TimberTech's sustainable Advanced PVC Decking is made of approximately 60 percent recycled PVC material right in the United States and is fully recyclable at end of life through AZEK's Full Circle Recycling® program.

Choosing TimberTech means you don't have to sacrifice good design. The company offers decking in a variety of color options that mimic ipe's natural coloring, from rich browns to weathered grays. And TimberTech Advanced PVC Decking has top-rated fire resistance, making it an ideal choice for fire zones. Thanks to innovative materials technology, TimberTech Advanced PVC Decking won't splinter or rot, and it's resistant to staining and fading. So you can enjoy the elevated look of premium hardwood without any of the maintenance: no sanding, sealing, or staining required. The decking is also covered by a 50-year limited fade and stain warranty and limited lifetime product warranty to protect your deck in the long term. For a low-maintenance, high-design decking option that's the perfect sustainable alternative to ipe, TimberTech will meet all your outdoor living needs.
